Klawock Hunters Shoot Falls Boat Capsizes One Drowns.

Companion of Haldeman has a narrow escape. Found unconscious by searchers, who picked up the capsized boat.

In an attempt to shoot the falls at the outlet of Big Salt Lake, near Klawock, January 18, Ben Holdeman, a Klawock citizen, was drowned and David Wheeler, his companion escaped a similar fate by a mere unexplained chance after having been knocked unconscious by a floating oar or piece of ice. The hunters left Klawock early Saturday morning intending to spend the day hunting along the beach in the salt lakes, of which there are two about six miles distant from Klawock. On their journey they captured a small fawn on the beach which they wrapped in a coat to keep it warm, (the thermometer registered four below at Klawock that morning.) Haldeman was in the stern, the fawn under the center thwart and Wheeler forward of the center of the boat when they approached the falls of

the lakes outlet about 12:30 that afternoon. Wheeler being new to the country objected to trying to shoot the falls but was prevailed upon by Holdeman who has been brought up in that country and who said he had been over them two or three times. Being partially convinced of the practicability of the feat, Wheeler drew in his oars and Haldeman in the stern steered the skiff over the falls, Haldeman exclaimed to his companion, "here we go" little dreaming that it was to another shore he was so swiftly bound.

Boat Turned Summersault.

Contrary to expectations the boat did not shoot out and land right side up but the bow down, the stern being thrown clear over turning a complete summersault and dumping its passengers into the

(Continued on last page.)

Taylor Murder Trial Soon Goes To Jury

Juneau, Alaska, Jan. 30.—The evidence in the trial of The United States vs. Irene Taylor for the shooting of John E. Anderson in Wrangell last July has all been given and the arguments are now on. The case will probably go to the jury tonight.

The witnesses from Wrangell in attendance are: U. S. Commissioner, W. G. Thomas; U. S. Marshal, W. F. Schnabel, Mrs. Schnabel, Dr. Dawes, A. Varet and Master Peter Usher. Usher was allowed to go from Wrangell to Juneau on the British boat, Princess May, after considerable red tape and special communication to Washington, D. C.

Basket Ball

Game Friday.

For about a week the members of the Wrangell Athletic Club have been practicing the seasons game at the Rink. Plenty of timber has been out and two teams have been selected for the game tomorrow night. The teams have been selected with the intention of making them evenly matched and when the maroon and white clash with the black and orange there will be a good game unless something upsets the dope as cooked up in practice. The probable lineup is as follows:

Maroons	Blacks
F. Lewis	F. O. Case
E. Lynch	F. C. Lewis
H. Dawes	C. F. Bronson
C. Brown	G. D. Lewis
W. Dalgity	G. F. Churchill

Admission 25 and 15c.

Catholic Ladies Form Society.

The ladies of the Catholic Church met yesterday at the home of Mrs. T. J. Case and organized a ladies auxiliary society which was named the Sidelity Club. The officers elected were: President, Mrs. T. J. Case; Vice President, Mrs. S. La Bounty; Secretary, Miss Haley.

Bender Hits Trail.

J. R. Bender, manager of the Wrangell Photoshow will make a trip south to Seattle, in the interest of his show business, on the Princess May tomorrow morning. Sefgius Mynock, of Juneau, will take care of the show business during Bender's absence.

Humboldt Brings Juneau Coal.

The Steamer Humboldt which went south Saturday brought 20 tons of sacked coal from Juneau to help out the shortage here brought on by the cold weather. Juneau narrowly escaped a coal famine by securing 200 tons from the Santa Anna which had 300 tons destined for the Chichgo Mining Company.

The Humboldt continued from Seattle to San Francisco for her annual overhauling and will miss a few trips of the Southeastern Alaska Schedule.

College and School.

Over 1,250,000 pupils attend high schools in the United States.

Erasmus Hall high school, Flatbush, N. Y., is shortly to celebrate its one hundred and twenty-fifth birthday.

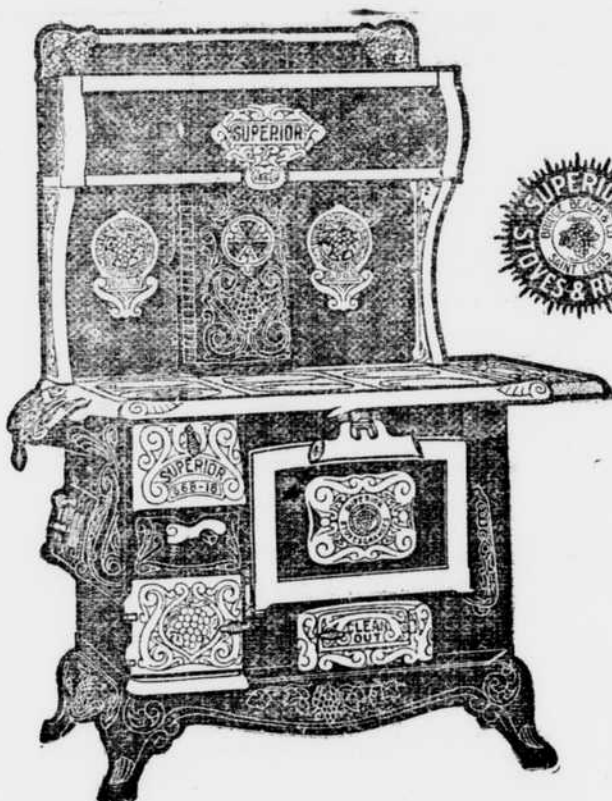

Among the regular students at American colleges and universities during the year 1911-12 were 4,856 from foreign lands.

One hundred and sixty-seven undergraduates, or about 12 per cent of the entire student body, at Princeton university are either wholly or partially working their ways through college.

Juneau Man To Receive Patent.

Field officers of the Interior Department overlook Harkrader claims of 137 acres on Admiralty Island.

On Saturday last, it was announced in Washington that a patent is to be issued for coal claims on Admiralty Island, about 100 miles from Juneau. Geo. Harkrader of Juneau is the locator of the claims. Speaking of the claims the Juneau Dispatch says: "The acreage was first located by him in the eighties. When congress passed a new coal law in 1904, Harkrader relocated his ground to keep within the precincts of the new law. Since that time he has been one of the many coal claimants who have been forced to spend time and money at development while an over-burdened congress instituted investigation after investigation into each and every claim presented."

Buy Here And Save Money

FACTORY prices on **Stoves, Ranges and Heaters** advanced strongly on the first of the year. Anticipating this, and wishing to protect our customers we have bought heavily and will be able to fill all orders for some time to come at the same old prices. We are sole agents for Bridge Beach & Co. and Shipmate Stove Co.—also carry a full line of cheaper goods. Our Stove Department is very complete.

School Notes.

(Carl Carlson, Correspondent.)

The following grades were made at the fifth monthly test.

High School - Weston Dalgity 100
Louis Lemieux 96
Senior Class - Talitha Ensley 99
Adolph Engstrom 98
Junior Class - Wallace Sinclair 97
Carl Carlson 96
Sixth Grade - Sam Ensley 95
H. Hofstad and H. Hollenbeck 94
Fourth Grade - Elsie Sylvester 96
Edith Horgheim 95
Third Grade - Harmon Ensley 91
Liberty Worden 90

Third grade - Ruth Lindman 96
Henry Ronning 93
Second Grade - E. Churchill 96
E. Lawrence 94
First Grade - E. Loftus 94
W. Sinclair 93
Primary Class - Jennie Ronning 95
K. McGehee 94
Weston Dalgity has made a "ringer," an average of 100 for two successive months.
The Senior Class has formed a study club, which meets weekly with the different members of the class.
They will have completed all the Eighth Grade subjects by March, and will take High School work for

the remainder of the term.

The High School has adopted Crimson and Cream for their colors and have ordered pennants. Our pins have not yet arrived but are expected "boatly."

The Senior Class Benefit will be given at the Red Men's Hall, Feb. 8, commencing at 8:30 P. M.

The entertainment will consist of songs, character sketches, monologues, recitations and drills, all to be given in costumes.

The class bespeaks the liberal patronage of the public. The proceeds are applied toward defraying the expenses of Commencement which is free to all.

PROGRAM:

Chorus - Class of 1913.
Monologue - Jennimas Courting.
Andrew Engstrom,
Chorus, Over the Ocean Blue Boys
Recitation, Late to School,
Kenneth McGehee,
Chorus - The Mermaid - Girls,
Character Sketch - The Oatmobile
Elery Carlson,

Duet - Longing for you, Belle
Walton, Edward Loftus,
Recitation - She liked him real
well - Margaret Grant
Chorus, I've loved her since she
was a baby.
Chorus, My Scotch Blue bell,
Sketch, 'Gma Body - Belle Hood,
Duet, Sprig of Heather,
Belle Hood, Ned Lemieux.

Song, Fiere paa Saetren T. Hofstad
Recitation - Jennie Ronning
Recitation, Our Flag, C. Carlson,
Flag Song, Little People.
Violin & Piano accompaniment,
Mr. Shefstad and Talitha Ensley,
Chorus - Mush - Mush.
Duet, Eileer Asthore, Estelle
Thomas, Carl Carlson.

Soliloquy, Way Past Xmas,
Edward Loftus,
Recitation, Laska, Elfrida Emery.
Duet, Good bye, Grace Wigg,
Thor, Hofstad.
Hatchet Drill, Little, Boys,
Chorus, Ragtime Joe, Boys,
Chorus, Santa Fee, Girls
Soliloquy, The Siwash, A. Loftus
Chorus, Golden Deer, School
Violin, Piano accompaniment,
Mr. Shefstad and Talitha Ensley,
Chorus, Alaska Maid, School
Impersonation, Mammy's Baby
Estelle Thomas
Chorus and March, Picaninnies
Little People
Negro Sketch, Uncle Reuben's
Baptism Leona Lindman.
Chorus, The Weddin, School.

The heights by great men reached and kept
Were not attained by leaps and bounds,
But they, while their companions slept,
Were getting on the ground.
-Cleveland Plain Dealer.

"Do you think our platform is all it should be?" asked one campaigner.
"Let us not worry about that," replied the other. "A platform is much like a seashore boardwalk. Most people forget all about it when the warm weather is over." -Washington Star.

Bobbie-My dance, I think.
Madge - I'm sorry; it's Duncan's dance.
Bobbie-Oh, that's all right. I bought you from him for 2 shillings. -Punch.

Book Agent-Here's a book, "A Million Ways to Make a Thousand."
The Man-I bought one before.
Book Agent-No, sir; that one was "A Thousand Ways to Make a Million."
-Judge.

The swindler murmured, "I am no Philanthropist, it's true,
And yet I'm always looking for
The good things I can do."
-Boston Transcript.

—LOGGING OUTFIT FOR SALE CHEAP. 81-2 x 10 yarding engine, launch with new 10 H. P. Corliss engine, bunk and cook house for ten men all in good condition and ready to go to work. For price and terms write to DeWitt Swigart.—Ketchikan.

That Guy Canned.

Spekin uv cans that guy the other day said "I've got the can question sifted to the bottom. There's tin cans, sanitary cans, Russian cans, kan-kans, I've tied cans to dogs tails. If theres anything about cans you can show me, I'd be glad to see it. I'm the guy that tied the kan onto Ketchikan." Note:- By way of example, the boss canned the wise one but he will be hired again early next week.

The Cookbook.

Fish is very unwholesome when not well cooked, as well as unpalatable. Two eggs bake in individual casserols add a slice of tomato and a sprinkling of cheese. In poaching eggs stir the water till it is whirling rapidly, then drop your egg in quickly and the edges will be round and smooth. Potato balls which are salted in but ter after being boiled are delicious. They should be served with a generous sprinkling of minced parsley. To prevent fruit pies from boiling over while baking add a tablespoonful of cornstarch to the fruit. Sweeten the fruit to taste, add cornstarch and heat before adding the crust.

SCHOOL SUPPLIES

WRANGELL DRUG CO.

PROTECTION FROM FIRE.

Water Supply For Sprinkler Systems Should Be Quickly Available.

The water supply for sprinkler systems is variously provided by elevated tanks or reservoirs, by pressure tanks, the city water pipes or fire pumps. Good protection requires that at least two separate and independent sources of water supply, properly checked against each other, be provided for each system and that at least one of these be automatic—that is, continuously ready for immediate operation without the intervention of any human agency.

The elevated or gravity tank, if at a sufficient elevation, of good size, and if properly safeguarded against freezing, forms a good, reliable primary supply. A connection from the city mains may be better if ample pressure and an adequate volume of water are justly available.

The pressure tank is a closed steel tank, usually placed in the upper story or on the roof, filled to about two-thirds of its capacity with water, and the balance with air under 75 to 100 pounds pressure. The object of the air is to force the water out of the tank under heavy pressure, the proportions of the compressed air and water being such that all of the water will be forced out of the tank under sufficient pressure to supply the sprinklers on the topmost line. This tank forms an excellent primary supply, owing to the heavy pressure available at the start, but it is not as reliable as either the gravity tank or the connection to the city mains, as it requires close supervision in the maintenance of the air pressure.

Fire pumps are not satisfactory as a primary supply, as in order to be of any value they must be automatic in their action, and the regulators necessary to effect this are too often out of order. Fire pumps, however, form an excellent secondary supply.

In addition to the regular water supplies, all sprinkler systems accessible to public fire departments should be equipped with one or more siamese steamer connections to enable the public fire department to force water into the system. Whenever practicable a system of outside control over the water supplies by means of post indicator gate valves, located well away from the buildings, should be provided.—Engineering Magazine.

RADIUM IMPROVES GEMS.

Interesting Discovery Made by a German Scientist.

The latest experiments made with radium confirm the statement that it has the property of changing the color of precious and semiprecious stones. The change is effected merely by continued exposure to radium salts, and the gems which give the best results are sapphires. A young German chemist is said to have secured sensational results from this discovery. He recently purchased several varieties of sapphires and placed them in a box with a small quantity of radium bromide. The transformation of the stones after about a month's exposure is described as follows:

ORIGINAL COLOR	NEW COLOR
White or uncolored	Topaz-like yellow.
Blue	Emerald green.
Violet	Sapphire blue.
Wine colored	Beautiful ruby.
Inferior dark colored	Deep violet.

The chemist visited the jeweler from whom he bought the stones at an average price of 18. 8d a carat and asked what the jeweler would offer for the parcel. The jeweler, suspecting nothing, even after close examination, offered 37s. 6d a carat for all the stones, with the exception of the small but exquisite ruby colored one, for which he said he was willing to give no less than £20 a carat.—Chicago Tribune.

New Milk Receptacle.

A patent has been granted to Edwin A. Hayden of Salt Lake City on a milk can which may help to solve the problem of delivering pure milk in the cities. His device consists of a can within a can, a dead air space surrounding the inner receptacle. The inner can is protected from extremes of temperature by an envelope of asbestos or other nonconductor. It may be removed easily for cleaning. One cover, when closed, seals both cans. Mr. Hayden says experiments have shown that the milk will be preserved for many hours at the temperature at which it is put in and that the device can be manufactured cheaply.

Strain Lubricating Oil.

It is the part of wisdom to strain oil before placing it in the lubricating tank or crank case. This is not only to prevent the clogging of the oil ducts, but to eliminate the possibility of abrasion by foreign substances. Small particles of sand or other grit in the oil frequently cause the pump to improperly or to be broken. To the least, every effort should be made to have the lubricating oil entirely free from any foreign substance.

MEASURING ICY RIVERS.

Methods Employed by Engineers Get
Exact Flow of Streams.

In order to determine the possibilities of rivers as a source of power or the extent to which they may be utilized for irrigation, navigation or other useful purposes the first necessity is to measure accurately the volume of their flows. For this purpose the United States geological survey maintains many stream gauging stations, and its hydrographic engineers are continually traveling from station to station to determine the flow of the rivers at various heights of water.

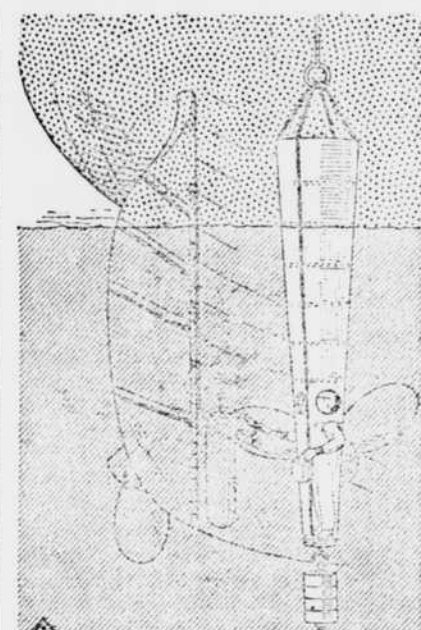

Different methods are employed to get at the exact flow of the rivers. In some places it is possible for the engineer to wade across the river, dropping in his electric current meter every foot or two at different depths, and thus being able to determine almost exactly the flow. As the records should be kept throughout the year, many of these measurements can be made only after chopping out a hole in thick ice. The hydrographer wears high rubber boots which may come up to his shoulders, but while he may keep dry he is naturally under such conditions apt to get rather cold. For measuring deeper rivers trolleys are erected and small cars run across them from which the hydrographer drops his instruments into the water.

In measuring some of the larger rivers cables a mile in length are used, the hydrographer traversing the entire distance and making his soundings every few feet. The results of these measurements are later computed into the number of cubic feet per second flowing down the rivers and published in reports that are issued to any persons who may be interested in irrigation, water power or other form of stream development.

USEFUL DIVING DEVICE.

Apparatus For Making Minor Repairs
to Ships Afloat.

A diving apparatus designed to be carried on vessels for use in making minor repairs to the hull or propellers has been invented by a German sea captain. It consists of a bag of water-tight canvas, weighted at the bottom and kept in shape by longitudinal rods. The bag, the top of which must be kept

DIVING APPARATUS FOR SHIP REPAIR.

above the surface of the water, has a diameter of two feet at the top and of about one foot at the bottom.

At the height of a man's eyes from the bottom are three glass windows, through which the man doing the repair work may view the operation. At a convenient distance below the windows are two sleeves with rubber cuffs, into which the operator inserts his arms in order to perform the work.

icy whirlpools under the falls. Wheeler, was not injured by the plunge and immediately began struggling for shore. Seeing his companion was making no efforts to save himself Wheeler seized him by the hair and shouted to Holderman to swim. At this time Wheeler was himself struck unconscious by an oar or piece of ice and remembered nothing more until about three o'clock in the afternoon when he regained consciousness lying half in the water and half on shore.

Firemen's Meeting.

The Alert Fire Company will hold the regular meeting for February next Monday evening. The annual Firemen's Ball which is usually given on February 22 will be arranged for and a good attendance is expected.

Department Overlooked A Few Claims.

That the Interior Department in protesting against the numerous coal claimants, overlooked two claim, has been made public during the past week. Even so we must admit that they were very thorough in their withdrawals.

The overturned boat was discovered and recognized by Jack Peratrovich who with Geo. Card commenced a search for the hunters finding Wheeler asleep on the beach and nearly frozen. Wheeler was taken aboard Card's boat and taken to Klawock where he soon regained his faculties, having sustained only slight injuries from the accident.

A searching party from Klawock found Haldeman's body next day, only a few feet from where last

seen by Wheeler. Holdeman was thirty-five years of age and a brother-in-law of Mrs. Wm. Taylor, of Wrangell. Throughout his life which, spent on the West Coast, Ben Holdeman was known for his daring and willingness to take the long chance as a matter of ordinary consideration. Wheelers escape is miraculous considering the unconscious condition and the dangerous whirlpools and rocks in the stream beneath the falls.
